## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 33 is rejected under 35 U.S.C. 103(a) as being anticipated by Sangyo et al (JP632777353) in view of Shokai (JP62079270) and further in view of Chinuprasad et al (5,817,405).

Sangyo et al teaches a method for formation of a heat-radiating panel A comprising one or more pieces of an electrothermal fabric 2 with a fiberglass weft weave F, a highly conductive wire 3 with the electric contacts 2b1 and 2b3, the coating with an insulating material 3a, but does not teach epoxy material or polyester, and holes made by a laser. Shokai teaches thermoplastic resin made out of epoxy or polyester (Abstract, page 1, line 1-4) and Chinuprasad teaches a laser for holes in epoxy resin (col. 1, lines 44-60). It would have been obvious to one having ordinary skill in the art to use in the invention of Sangyo the thermoadhesive epoxy material or polyester as taught by Shokai as a matter of obvious design choice because one of ordinary skill in the art would have

expected an Applicant's invention to perform equally well with epoxy or polyester as taught by Shokai, and also to use a laser for drilling holes in epoxy in order to make registration holes as taught by Chinuprasad (col. 1, lines 44-60).

***Allowable Subject Matter***

2. Claim 34 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
